PHYSICAL MEDICINE MODALITIES

For over 25 years, Chattanooga has been the world leader in electrotherapy devices and has gradually expanded its product offering to include other essential physical medicine modalities, such as ultrasound, shortwave and laser therapy.

Chattanooga developed these treatment options under the well established Intelect product range, appreciated by therapists for its ease of use and functional design.

In 2010 Chattanooga entered the shockwave market via the launch of the Intelect RPW – a shockwave device developed using state-of-the-art technology and in collaboration with leading shockwave component suppliers.

Chattanooga is committed to continually working with customers to develop smart solutions that empower therapists to provide the best treatment to their patients.

D-ACCTOR® applicator

The D-ACCTOR® applicator can be used with a variety of transmitters for the generation of shockwaves, or a combination of shockwaves and vibrations.

Applications:
- Myofascial trigger points
- Disorders of tendon insertions
- Activation and tightening of muscle and connective tissue
- Acupuncture shock wave therapy
- Cellulite treatment (stages I – III)
- Elimination of lymphatic congestion
- Regulation of muscle tone
- Medical massage

FEATURES

Radial pressure waves offer a non-invasive treatment solution for long-term insertion and soft tissue pathologies. Local treatment of the affected area will enhance and reset the healing pattern, while reducing pain and improving function.

With very few negative side effects, Radial Pressure Wave therapy is indicated for conditions that are normally very difficult to treat, and is now widely used for many therapeutic and wellness applications.

Physical effects of radial pressure waves include: pain reduction (Gate Control theory), increased metabolism, as shockwaves influence the tissues on a cellular level, revascularization effect, where the renewed blood flow promotes tissue healing and regeneration, and muscle tone recovery.

2 Channel Output Connection

Intelect® RPW allows the connection of 2 hand pieces for quick and efficient use of complementary applicator transmitters during patient treatment.

V-ACCTOR® Applicator

The V-ACCTOR® applicator, used for vibration treatment, is an ideal complement to Radial Wave Therapy and contributes to long-lasting results.

Applications:
- Body shaping
- Lymphatic drainage
- Wellness massage
- Muscle and connective tissue activation
State-of-the-Art Navigation
• Easy-to-use menu-driven touch screen technology allowing quick and easy access to Quick-link Indications, Clinical Protocols™ and User Protocols

Unique Optimal Energy Level Adjustment
• Unique ramp feature providing a gradual, automatic and smooth intensity increase during treatment

Clinical Resources
• Intelect® RPW includes a full suite of easily accessible references: graphics library of anatomical images and pathologies, hand-piece placement image bank, contraindications...

### Features

Like our bigger Intelect unit, the Mobile RPW offers radial pressure wave treatment as a non-invasive treatment solution for chronic tendonopathies and other soft tissue disorders. Treatments administered to the affected areas stimulate the regeneration process of injured tissues which have sustained histological changes.

Radial pressure wave therapy is best indicated for resilient conditions that have not responded to traditional therapy.

Physiological effects of the shockwave include: increased cell permeability, neovascularization, pain control and reduction of adhesions and fibrotic tissue prohibitive of healing.

### PROBES

#### FEATURES

**A SAINT-CLOUD CLASSIC**

2-Ring Vaginal Probe

The ring electrodes permit stimulation of the entire vaginal wall. The elongated end facilitates holding. The constricted shape reduces the risk of expulsion during treatment.

**B SAINT-CLOUD PLUS Vaginal Probe**

The low, lateral position of the large electrodes facilitates muscle work and enhances stimulation comfort. The holding collar ensures that the probe is kept at the optimum penetration depth. The disconnection of the cables allows the probe to be fully immersed in a disinfecting bath.

**C SAINT-CLOUD Anal Probe**

The 110° angulation ring permits puborectal and anal striated sphincter work. The holding tab helps to hold the probe in place and prevents the risk of expulsion during treatment.

**G Snap Adapters**

Adapters for connecting snap style electrodes to pin style lead wires. Snap adapters allow easy connection of snap electrodes to any Intelect® device.
